

LINERS FOR MATERIAL HANDLING

For Truck Bodies, Hoppers, Screw Conveyors, Buckets, Discharge Chutes...

Choose the right liner for your application.

NEW FOR 2005!

RED HOT LINER
FOR HOT ASPHALT TO 205°C

PLATINUM LINER

BLUE IRON LINER

BLUE STRIPE LINER

SUPER-SLIDE® PLASTIC TRUCK BODY LINERS

- Eliminate Sticking - Dump Loads Easier - Reduce Wear

When it comes to materials handling, get the job done... slick. Super-slide® provides a non-stick, self lubricating, seamless liner that virtually eliminates sticking materials.

Save time and money with a Super-Slide® plastic liner

Super-Slide® Platinum™ is our most abrasion resistant, durable liner. It is virgin UHMWPE which also has high temperature additives to allow 12.7mm thick to withstand up to 175°C hot asphalt.

Super-Slide® Blue Iron™ is a UHMWPE liner with added silicone for extremely high wear and non-stick properties.

Super-Slide® Blue Stripe™ is a virgin HMWPE liner with added ultraviolet inhibitors and proprietary internal lubricants.

With a Super-Slide® box liner installed, spend your time hauling, not shoveling. The slipperiness of Super-Slide® equals about 30% more slope, so your load dumps easier, without raising the trailer as high. You save time while reducing the chances of twisting or tipping your trailer.

Super-Slide® also saves money by protecting your aluminium bed from wear without robbing your payload with excessive weight. Super-Slide® installed for full protection is only about 1/3 the weight of aluminium. Many owners report 100% payback on aluminium repair savings alone. And not only are contact surfaces protected from abrasion, they can be kept clean with a lot less time and effort. Plus Platinum™ liners can carry hot asphalt at temperatures of 175°C, eliminating the need for expensive release agents.

Weldable liner means no seams!

Super-Slide® is weldable, allowing sure sealing. Welding also means repairs are an option if your liner should become damaged.

Installation & repair service available.

Most durable and heat resistant up to 175°C (12.7mm thick only).

PLATINUM™ UHMWPE

Heavy duty rock liner with high abrasion resistance properties & excellent release.

BLUE IRON™ UHMWPE

Economical, dependable, medium duty with great release properties.

BLUE STRIPE™ HMWPE
